

The Oxford Placement Test is driven by a smart test engine. When a student answers a question, the test adapts to their answer. If the student answers a question correctly, they get a more challenging question; if they answer a question incorrectly, they get a slightly easier question. This means that the test responds to each individual student's ability, tailoring the questions so that the level of challenge is just right. Because there is a large bank of questions to choose from, each student receives a unique testing experience which is fast, accurate and reliable.
