

BEng (Hons) Civil Engineering (Bridging)

Programme Details

Final Qualification

BEng (Hons)

Language of Study

English

Mode of Study

Full Time

Programme Structure

Study Period

2 Years

Total Credit Hours

81 Credit Hours

Number of Courses

26 Courses

Brief about the Programme

The Bridging Programme is open to students who have completed a diploma or associate degree in related disciplines from the Kingdom of Bahrain or an equivalent qualification from abroad, provided the certificate is accredited by the relevant authorities in the issuing country.

This programme aligns with the Engineering Council UK (ECUK) Standard for Professional Engineering Competence (UK-SPEC). The curriculum develops core engineering numerical abilities alongside creative and enquiry-based thinking required by employers. Students gain a solid foundation to enter the civil engineering industry with the skills needed to excel in a competitive environment.

The programme leads to a dual award from the Applied Science University (ASU Bahrain) and London South Bank University (LSBU-UK).

Aims of the Programme

1. Graduates will be prepared for a professional career in the civil engineering industry with diverse employers across different countries.
2. Graduates will be equipped for postgraduate study and to assume responsible professional roles in the construction industry, becoming lifelong learners who appreciate the societal value of civil engineering.
3. Graduates will gain a broad and in-depth understanding of civil engineering principles.
4. Graduates will acquire analytical, problem-solving, and subject-specific skills, including the ability to evaluate evidence, arguments, and assumptions to reach sound judgements and
5. communicate effectively.
6. Graduates will gain the academic qualifications required for advanced postgraduate study and the educational base needed to pursue Chartered Engineer status.

Institute of Building

Career Paths

1. Civil Engineer
2. Structural Engineer
3. Project Engineer
4. Site Engineer
5. Transportation Engineer
6. Water Resources Engineer
7. Environmental Engineer
8. Construction Manager
9. Geotechnical Engineer
10. Infrastructure Consultant

Entry Requirements

1. The applicant must hold a diploma or associate degree from the Kingdom of Bahrain or its equivalent from outside the Kingdom, provided the qualification is accredited by the relevant authorities in the issuing country.
2. The applicant's cumulative GPA must be at least "Good" or its equivalent. If the applicant's GPA is below the required minimum, they must either provide evidence of at least one year of relevant professional experience or successfully complete a number of remedial courses according to their specialization.
3. The applicant's previous specialization must qualify them to study in the programme they wish to join.
4. Applicants holding professional or vocational qualifications (such as National Diploma - ND, Higher National Diploma - HND, or equivalent) are required to complete a
5. number of remedial courses according to their specialization, in addition to any HEC compulsory courses where applicable.
6. The applicant must have obtained a score of 6.0 or higher in IELTS, or an equivalent qualification. (Free English-language support will be provided based on the initial OOPT test score.)

Study Plan

HEC Compulsory Courses				
No.	Course Code	Course Title	Credit	Level
1	ASU_S_HUR	Human Rights	0	S
2	ASU_S_ALA ASU_S_ALN	Arabic Language or Arabic Language for Non-Arabic Speakers	0	S
3	ASU_S_BCH	Bahrain Civilization C History	0	S

Programme Study Plan				
No.	Course Code	Course Title	Credit	Level
Year 1 – First Semester				
1	ASU_5_AEM	Advanced Engineering Mathematics	10	5
2	ASU_5_DC1	Design and Construction 1	10	5
3	ASU_5_HYD	Hydraulics	10	5
4	ASU_5_STM	Structural Mechanics	10	5
5	ASU_5_EEG	Environmental Engineering	10	5
6	ASU_5_EME	Engineering Management and Economics	10	5
Year 1 – Second Semester				
1	ASU_5_IHE	Infrastructure and Highway Engineering	10	5
2	ASU_5_DC2	Design and Construction 2	10	5
3	ASU_5_ASD	Advanced Structural Analysis and Design	10	5
4	ASU_5_THS	Theory of Structures	10	5
5	ASU_5_CCF	Civil Engineering and Construction Field Studies	10	5
Year 1 – Summer Semester				
1	ASU_5_ITS	Internship	10	5
Year 2 – First Semester				
1	ASU_6_SA1	Structural Design and Analysis 1	10	6
2	ASU_6_CEM	Civil Engineering Materials	10	6
3	ASU_6_FDS	Foundations	10	6
4	ASU_6_ESD	Engineering System Design	10	6
5	ASU_6_ERM	Engineering Research Methods	10	6
6	ASU_6_IEM	Innovation, Enterprise and Management	10	6
Year 2 – Second Semester				
1	ASU_6_CTC	Current Topics in Civil and Construction Engineering	10	6

2	ASU_6_GTE	Geotechnical Engineering	10	6
3	ASU_6_SA2	Structural Design and Analysis 2	10	6
4	ASU_6_CMG	Construction Management	10	6
5	ASU_6_PRJ	Project	20	6

ASU_5_AEM Advanced Engineering Mathematics

This module covers advanced undergraduate engineering mathematics.

ASU_5_DC1 Design and Construction 1

This module offers the knowledge and skills of masonry and reinforced masonry structure design to Eurocodes, analysis of structural form and the ability to design in both qualitative and quantitative directions.

ASU_5_HYD Hydraulics

This module develops the fundamental principles of Fluid Mechanics and applies them to practical applications of analysis and design. Students will develop a greater understanding of the flow of ideal and real fluids and will apply these principles to the analysis and design of pipes and open channels. Students will perform simple laboratory tests and prepare a formal report.

ASU_5_STM Structural Mechanics

This module introduces Building Information Modelling (BIM) and explains how BIM has changed the construction industry worldwide. Case studies of projects where BIM improved sustainability and reduced cost were studied. Students model typical multi-storey framed steel and concrete buildings in Autodesk Revit and apply appropriate variable actions on the floors. They transfer the building model to the Autodesk Robot Structural Analysis programme, analyses, design beams, and columns. They compare computer results to hand calculations results, obtained using load take-down methods and design formulae.

ASU_5_EEG Environmental Engineering

This module takes the principles of environmental engineering and applies them to practical applications of analysis and design. The student will be introduced to the principles of water, water quality, and wastewater treatment processes and to consider sustainability issues. Students will develop an understanding of the hydrological cycle and surface hydrology and apply these principles to the calculation of precipitation and unit hydrograph. Students will also learn the basics of groundwater flow and the problem of contamination in groundwater. The unit also introduces air pollution and noise pollution.

ASU_5_EME Engineering Management and Economics

This module helps to prepare students for their future roles as professional engineers in a number of ways. It includes:

- Detailed study of project planning techniques, including network techniques, with preparation for the student's individual projects
- An overview of the business functions which interact with engineering
- An introduction to Systems Thinking. A formal method for studying systems will be introduced.
- An introduction to recruitment, retention and equal opportunities in employment
- The use of published Standards in engineering
- Use of the BSI website to access national and international standards
- An introduction to statistics and their use in managing engineering processes
- An introduction to Quality Management, with particular reference to the ISO 9000 series

Module Descriptors

- An introduction to European Directives and harmonised standards.
- Writing technical business reports, including the importance of acknowledging published sources and the use of formal methods for doing so.

ASU_5_IHE Infrastructure and Highway Engineering

This is substantially a theory and project-based module. It brings together construction, design, contractual, planning, management and safety processes. It emphasises the link between materials and site geological properties and their relationship with design and execution. Highway engineering will occupy half the contact time, and this will include geometric and structural design aspects, which will integrate some geology, earthwork and drainage. The module will also include site visits. Standard laboratory tests were carried out, and bitumen properties were derived from the results. Problems to be solved include geometric design, traffic volume, channelisation, and hydrology. Lab projects involve roadway designing.

ASU_5_DC2 Design and Construction 2

This module offers the knowledge and skills of marine structures, analysis and design of Eurocodes, analysis of structural form and the ability to design in both qualitative and quantitative directions, including ports and offshore structures and dams.

ASU_5_ASD Advanced Structural Analysis and Design

This module develops students' practice with structural engineering, provides an introduction to structural concepts, and provides an overview of specific techniques for analysing indeterminate structures, beams and frame structures.

ASU_5_THS Theory of Structures

This module mainly deals with the matrix-stiffness analysis of structures. It begins with a review of the basic concepts of structural analysis and matrix algebra and shows how the latter provides a mathematical framework for the former.

This is followed by detailed descriptions and demonstrations through many examples of how matrix methods can be applied to linear static analysis of skeletal structures (plane and space trusses; beams and grids; plane and space frames) by the stiffness method.

Also, it is shown how simple structures can be conveniently solved using a reduced stiffness formulation, involving far less computational effort. Finally, the Finite Element Analysis is discussed.

ASU_5_CCF Civil Engineering and Construction Field Study

The module introduces students to the practical side of the civil and construction engineering industry. It gives them the opportunity to visit sites. It ensures that students are aware of real-life situations in projects. Students will be able to critically appraise and evaluate construction management situations and report on them.

ASU_5_ITS Internship

This module provides the students with an opportunity to experience the industrial world and be part of a team working on real-world projects. The University assists each student in finding the most suitable industry.

ASU_6_SA1 Structural Design and Analysis 1

This module offers the knowledge and skills of reinforced concrete design to Eurocodes, analysis of structural form and the ability to design in both qualitative and quantitative directions.

ASU_6_CEM_Civil Engineering Materials

The module provides an overview of general civil engineering material performance requirements and properties: strength, stiffness, durability, and appearance. This will include concrete, steel, and timber. The module will provide an overview of available materials, geotextile functions and mechanisms, designing with geotextiles, stresses in materials and biaxial stress systems.

ASU_6_FDS Foundations

Shallow foundations design. Bearing capacities of soils, safe, net and ultimate; factor of safety; mass concrete footings; footing resisting lift; column type footings. Two-way footing concentrically or eccentrically loaded; AS 3600 code requirements; design loads; critical section for shear; punching shear and bending shear, anchor bolts. Combined footings; design of strap or cantilever footings. Design of mat foundations. Design of retaining walls. Design of reinforced retaining walls. Sheet pile walls design. Residential footings design.

ASU_6_ESD Engineering System Design

To involve the student in the process of engineering project development from planning to detailed design and working with a project team.

ASU_6_ERM Engineering Research Methods

The module studies the scope and significance of engineering research. It introduces students to the various aspects of engineering research; its types, tools and methods and students will learn how to apply research techniques to real-world situations. The module covers topics such as the identification of a topic by the student, proposition of hypothesis, formulation of research inquiries, development of literature review, and select research design and methodologies. Additionally, students will learn data collection techniques; primary and secondary data with application to specific problems, scaling and research instrument design and sampling design.

ASU_6_IEM Innovation, Enterprise and Management

The module is intended to be practical, with students developing some appropriate ideas of their own in such a way that they become practical, profitable propositions. Students will practice ways of finding ideas, testing those ideas and developing them, and will write their own business strategies, risk assessments and scenario testing so that they demonstrate the commercial viability of their ideas.

One of the assignments will require students to work in groups, typically to adopt a concept and develop it such that it could be commercially viable and sustainable. This might be a product or a service (such as consultancy or contract management).

Students will experience topics addressing intellectual property, market research, market placement, advertising and finance. They will be expected to reflect on what they can contribute to a group.

ASU_6_CTC Current Topics in Civil and Construction Engineering

The module introduces students to new issues, ideas and trends in the civil and construction engineering industry. It ensures that students are kept up-to-date with developments. Students will experience topics addressing Building Information Modelling, 3D Printing, Smart analyses of Buildings and Smart Cities, Modular Construction, Plastic Roads, Sustainability issues, and other related matters

ASU_6_GTE Geotechnical Engineering

This module shows how the soil mechanics theories introduced in Soil Mechanics w applied to the solution of a number of geotechnical analyses and design problems.

ASU_6_SA2 Structural Design and Analysis 2

This module offers the knowledge and skills of steel design to Eurocodes, analysis of structural form and the ability to design in both qualitative and quantitative directions.

ASU_6_CMG Construction Management

This module prepares students with the ability to critically appraise and evaluate the performance of the construction industry and shed light on the role of construction management.

ASU_6_PRJ Project

To plan, execute, review and report upon a piece of project work related to the BEng programme being followed by the student. A Module Guide for the project is augmented by eight lectures.
